DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 9 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

There is no antecedent basis for the recited non-stick coating.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cheng in view of Welhouse.

There is disclosed in Cheng a cooking pan comprising: a base 2 having an upper cooking surface, the surface being provided with a pattern of concentric corrugations 8 having ridges and grooves therebetween; and a non-stick coating 10 applied to the cooking surface. In regards to the claimed ridge to ridge spacing range, it is recited in Cheng that the range can be 2mm or wider.

Welhouse discloses a distance between a ridge top 15 and a groove bottom 17 in the range of 0.005" to 0.012". It would have been obvious to one skilled in the art to

• Art Unit: 1761

modify the ridge top to groove bottom distance of Cheng as taught by Welhouse, in order to improve the heat transfer and drainage performance of the cooking pan.

In regards to the various distance ranges recited in the claims, it would have been obvious to one skilled in the art to construct the cooking pan within those ranges, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patent to Doyle et al is cited for its disclosure of various distances between a raised member on a pan bottom and a valley.
